1 About BroadTouch Business Communicator for Desktop

BroadTouch Business Communicator for Desktop is a native Windows and Mac client for Unified Communications, providing the following communication features:

- Instant Messaging and Presence
- Voice Calling (VoIP)
- Voice Calling (Desk phone)
- Video Calling
- Desktop Sharing
- BroadWorks Call Settings

2 Getting Started

This section contains the essential information for getting started with BroadTouch Business Communicator.

2.1 Installation

Your service provider provides the download of the installer.

Windows

- Double-click the installer executable and follow the installation instructions.
- Launch BroadTouch Business Communicator.

OS X

- Double-click the disk image.
- Copy the application into the *Applications* folder.
- Launch BroadTouch Business Communicator.

2.2 Sign In

When you first launch the application, you are prompted to sign in.

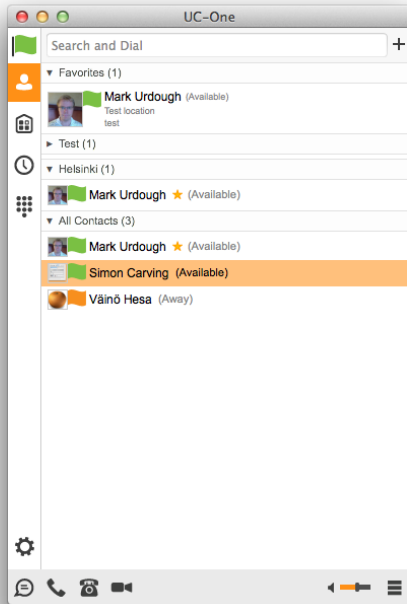

- 1) If displayed, enter the login Uniform Resource Locator (URL) provided by the service provider.
- 2) Enter your BroadWorks user name and password.
- 3) Select whether you would like BroadTouch Business Communicator to remember your password.
- 4) Select whether you would like BroadTouch Business Communicator to sign you in automatically on subsequent launches.
- 5) Click **Sign In**.

NOTE: If you choose automatic sign in, you are automatically signed in and taken to the contact list upon subsequent BroadTouch Business Communicator launches. Otherwise, you are presented with the *Sign In* screen.

After logging in, a popup dialog may appear informing you about emergency calls. You may also see a banner in the *Main* window related to emergency calls. Depending on your service provider settings, emergency calls may not be allowed. In this case, calling an emergency number displays a popup dialog. A notification message in the *Main* window may also display.

2.3 Main Window

When you start BroadTouch Business Communicator for the first time, your *Contacts* list is empty. Use the *search* field to find people and add them to your *Contacts* list. Contacts can also be added manually by clicking the **Add** button. Client windows can also be set to be always using the main window menu option. Note also, that depending on your service provider settings, the order of the left pane icons may vary. The left pane call settings icon and menus are visible depending on your service provider settings. The dial pad is also integrated with the *Main* window.

	My Information – View and update your information, for example, your presence, avatar, and location.
	My Room – This is your permanent communication room. Participants can dial in to your audio bridge.
	Contacts – View your contacts.
	Communications History – View previous chats and calls.
	Full Enterprise Directory – Show all contacts of the directory.
	Dial Pad – Make calls, it is integrated with the main window.
	Chat – Start an instant message conversation with a selected contact.
	Call – Make an IP audio call to a selected contact.
	Call from Phone – Make a Click-To-Dial call from your desk phone (or secondary device).
	Video Call – Make a video call to a selected client (VoIP).
	Menu – Open Call Settings, Preferences, and Help.
	Call settings menu – Use for quick access to call settings such as call forwarding.
	Add – Add a contact, group, or conference.

My Information

- Click the avatar to update your status or location and enter free text.
- Double-click the avatar to upload a picture or use a right-click menu.
- Right-click the avatar to update your status.

Presence

You can set your presence to one status indicated in the following table.

Icon	What it means
	The green presence icon indicates that the user is online and ready for communication.
	The yellow presence icon indicates that the user is online but has been idle or away from their computer for more than ten minutes.
	The red presence icon indicates that the user is busy and does not want to be disturbed.
	The grey presence icon indicates that the user is offline and the only available contact method is calling or chatting.
	This icon indicates that the contact is busy on a call. This is an automated presence status.
	This icon indicates that the contact is busy in a meeting. This is an automated presence status. The <i>Busy – In Call</i> status overrides the <i>Busy – In Meeting</i> status so this one is only seen if there is a meeting but no call.

BroadTouch Business Communicator can automatically update your presence to the following:

- *Busy – In Call*
- *Busy – In Meeting* (Windows only)

Location

Your location is automatically determined by your public IP address; however, you can manually set the text to appear for your location and time zone using the location dialog box.

2.4 Communications Window

After starting communication with one or more contacts, a *Communications* window is displayed for chat and may be displayed for calls depending on your service provider settings. The call window can also be integrated with the *Main* window. From this window, you can perform the following actions:

- Escalate a chat to include audio, video, and desktop sharing
- End an audio or video call
- Open the dial pad
- Mute your microphone
- Adjust your speaker volume
- Place a call on hold
- Transfer a call

2.5 Start Chat

Start a chat using one of the following methods:

- Double-click a contact from the *Contacts* list or search results.
- Left-click one or more contacts from the *Contacts* list or search results and click the **Chat** button.
- Right-click one or more contacts from the *Contacts* list or search results and click the **Chat** button.
- On the *Communications History* list, double-click a chat entry.
- In a *Communications* window, click the **Chat** button.
- In a one-to-one chat, transfer files by clicking the **Send File** button in the *Communications* window or use the drag-and-drop method so that they are moved to the *Communications* window.

2.6 Make Audio or Video Call

Make an audio or video call using one of the following methods:

- Left-click one or more contacts from the *Contacts* list or search results and click the **Call**, **Call from Phone**, or **Video** button.
- Right-click one or more contacts from the *Contacts* list or search results and click the **Call**, **Call from Phone**, or **Video**.
- Enter a phone number in the *Search and Dial* field.
 - Press **ENTER** to start a VoIP call.
 - Click the **Call**, **Call from Phone**, or **Video** button.
- Open the dial pad, enter a phone number, and then click the **Call**, **Call from Phone**, or **Video** button.
- On the *Communications History* list, double-click a call entry.
- In the *Communications* window, click the **Call**, **Call from Phone**, or **Video** button.
- When viewing a contact's profile, click the **Call**, **Call from Phone**, or **Video** button.

NOTE: If dialing a phone number that requires additional dual-tone multi-frequency (DTMF) tones (for example, a conference bridge), you can type the numbers on your keyboard while the *Communications* window has focus or open the dial pad in the *Communications* window.

2.7 Share Your Desktop

Share your desktop by following these steps:

- 1) Click the **Share Desktop** button.
- 2) Click the **Start** button after the share preparation has completed.

NOTE: To share your desktop, you must enter your web collaboration credentials in *Preferences* → *Credentials*, unless your service provider has automated provisioning in use. For more information, see section [13 Preferences](#). You can participate in desktop sharing sessions by another user even without having your own sharing credentials.

2.8 Active Communications

Active communications appear at the top of the *Contacts* list in the main window. This area provides an easy view to see the people with whom you are communicating. By default in Release 20.1.0, the call window is shown in the *Active Communications* area in the *Main* window (where the call can be fully controlled in the desktop client). It reduces the number of communications windows; however, a separate call window can still be opened using an *Active Communications* menu. The following is also available in this area:

- Double-click an active communication to bring this *Communications* window to focus if the call window is separately shown. If the call window is integrated, you can use a menu option to show it separately.
- See who has sent you a chat message, but only after you accept the chat session. Before the chat session is established, the chat items are not visible in active communications but a history badge is visible.
- End a call.
- Mute the microphone.
- Place a call on hold.
- Merge two calls or transfer by dragging and dropping calls onto each other.
- Transfer a call.
- Make conference calls.
- See call recordings.
- Park and retrieve calls.

As a service provider option in Release 20.2.0 and onwards, more buttons can be added to the active communications area:

- Conference
- Call transfer
- Call park

When enabled, you can use the buttons for faster access to the services.

2.9 My Room

My Room is an always available and permanent room you can use to chat with anyone that joins.

If you assign a conference bridge to your profile in *Preferences* → *Credentials*, then in your room, you and your attendees can click the **Call** or **Video** button to have BroadTouch Business Communicator automatically dial in to the conference and enter the appropriate entry codes. Note, if your service provider has auto-provisioning enabled, then you cannot edit these details. If your service provider has silent dialing enabled, then you cannot hear any DTMF tones when dialing into My Room (the call is made directly).

If a conference bridge is not specified, you can initiate an N-way call in your room. BroadTouch Business Communicator dials out to all participants and takes everyone off hold after the last attendee answers.

You can invite others to your room by dragging and dropping them from the *Contacts* list into the *My Room Communications* window.

Others join your room by right clicking your name on their *Contacts* list and selecting *Join Room*.

2.10 Select Audio Devices

If you have multiple audio devices available for your microphone or speakers, select the preferred audio device before starting a call.

Windows

- 1) Click the BroadTouch Business Communicator logo in the main window title bar.
- 2) Select *Preferences*.
- 3) Select *Audio*.
- 4) Set a playback device (speakers).
- 5) Set a recording device (microphone).
- 6) Click **OK**.

OS X

- 1) Select *BroadTouch Business Communicator* from the main menu.
- 2) Select *Preferences*.
- 3) Select *Audio*.
- 4) Set a playback device (speakers).
- 5) Set a recording device (microphone).
- 6) Click **OK**.

If “Use default” is selected, then BroadTouch Business Communicator uses the default device set in the operating system preferences. For Windows, if “Default Communication Device” is defined, it is selected over the “Default Device”.

If you are using headsets, you can also select a separate device than the headset for alerting incoming calls.

3 Contacts

Contacts are the people with whom you communicate and, in most cases, you see their presence and share your presence with them. There are three types of contacts:

- *Contacts* – Actual people with whom you communicate.
- *Conferences* – Audio or video conference bridges that you use to communicate with others. Silent dialing into the bridge also applies to these contacts if enabled by your service provider.
- *Groups* – Containers of contacts and/or conferences.

3.1 Add

When you sign in for the first time, there are no contacts on your contact list. Add a new contact at any time by selecting the *Add Contact* item from the menu or choose the **Add Contact** button from the main window.

In the *Add Contact* dialog box, enter the contact's information and then click **Add Contact**. By default, your presence information is always shared with a new contact if an Extensible Messaging and Presence Protocol (XMPP) address is provided.

If you are accepting contacts via a buddy request, you may see the contact card after accepting the buddy request, depending on the service provider settings.

However, you can always share your presence information later by selecting *Subscribe* on the menu for that contact on the contact list (right-click the contact or arrow button). Note that the contact must accept your subscription request for you to establish the presence relationship successfully.

The newly added contact appears on your contact list.

Add a conference contact by clicking the same button you did for *Add contact* and choosing the *Add conference* menu option. A conference contact is a special contact used for conference bridges to avoid remembering PIN codes and conference number, for example, recurring conferences. Just create a contact for the weekly conference, add a conference bridge number and PIN, and join the conference just by right-clicking the contact or choosing it and clicking the **Call** button.

Choose the *Add group* menu option to add a new group to the contact list.

3.2 Edit

Edit a contact by selecting the contact first. After you select the contact, right-click anywhere in the area of the selected contact and a menu of options appears. This base principle is the same for normal contacts, conference contacts, and groups. Note that depending on your service provider settings all or no contact card fields may be editable. Depending on your service provider settings, you may also see a button for synchronizing the contact card with the Telephony directory or the synchronization may take place automatically. When the manual synchronization button (cloud icon) is visible, there is no automated syncing of the contact card details with server information. To synchronize the contact card data, click on the cloud icon.

- *Unsubscribe* removes the presence relationship between you and that contact. This means you do not see the contact's presence information and your contact does not see yours. To re-establish the presence relationship, select *Subscribe*. An unsubscribed contact remains on the contact list and is always shown without an icon. Any contact that is not presence-enabled is shown in the same way.
- *Remove* removes the contact from your contact list.

-
- *View Profile* opens the *Contact Information* dialog box where you can add, edit, or remove information. This works for both normal and conference contacts.
 - For groups, choose the *Edit* menu option to rename a group.

3.3 Filters

You can filter contacts in two ways:

- Use the *filter* field to search by contact name. The contact list is filtered in real time as you type.
- Alternatively, use the filter menus available by right-clicking the *Contacts* icon in the left pane to display only specific types of contacts such as favorites or online contacts. You can also sort contacts based on first or last name or choose whether to display the contact's avatar and availability status in the contact list.

4 Presence

For each contact you have subscribed to, you can see their presence. Similarly, your contacts can see your presence on their contact list.

Presence means that your friends are able to see whether you are available to communicate, for example, “I’m busy” or “I’m available”.

Icon	What it means
	The green presence icon indicates that the user is online and ready for communication.
	The yellow presence icon indicates that the user is online but has been idle or away from their computer for more than ten minutes.
	The red presence icon indicates that the user is busy and does not want to be disturbed.
	The grey presence icon indicates that the user is offline and the only available contact method is calling or chatting.
	The question mark indicates that a subscription is pending and the contact has not yet approved sharing their presence.
	This icon indicates that the contact is busy due to a call. This is an automated presence status.
	This icon indicates that the contact is busy due to a meeting. This is an automated presence status. The <i>Busy – In Call</i> status overrides the <i>Busy – In Meeting</i> status so this one is only seen if there is a meeting but no call.
	This icon indicates that the contact is only available on mobile BroadTouch Business Communicator.
	This icon indicates that the contact is only available on a compatible desktop phone, not BroadTouch Business Communicator.

The avatar in this version is not completely in real time. The avatars are retrieved at login, when the contact is added, and when the contact comes online.

Double-click the avatar to change it. A File Explorer view opens.

If you see an error message at the top of the *Main* window “XMPP Unavailable”, it means that the XMPP connectivity has been lost for chat and presence; however, you can still make calls. You should contact your service provider.

Have the Outlook calendar automatically change your presence to *Busy – In Meeting* by enabling this in the *Preferences* → *General* tab.

The presence update is only triggered by appointments and meetings that are either accepted by the user or made by them. All day meetings do not trigger a presence change to *Busy – In Meeting*.

The XMPP address of a contact cannot be changed. Instead, you must delete the old address and create a new one.

Location in presence is done based on the IP address that the machine is using. The IP address is mapped to a physical location. Change the location manually by clicking the avatar and then the location icon to go to the manual location and change the view.

5 Chat

5.1 Chat View

When you initiate a chat, the *Chat* window opens. Chatting with a contact is possible only when you are both online. If your contact initiates a chat, you see a pop-up notification in the bottom right-hand corner of the screen. If you close the *Chat* window and open it again, sent chat messages are shown in the window as chat history.

When the chat opens, you see the contact's information at the top of the screen. If you want to use the whole area for writing, you can press the background of the information or the top bar. You can contract or expand the information of the contact during the chat and you can leave it open or closed depending on your preference.

At the top of the message area, there are four links: Yesterday, Last week, Last month, and All history. From these links, you can load history from your local storage and different time frames. You can delete the history using the drop-down menu.

In the text field, you can add a smiley emoticon. Smiley emoticons can also be added by manually entering the corresponding characters that represent that particular emoticon. You can send text by pressing **ENTER**.

To enter a line break in the *text* field, you can use the following key commands:

- CTRL+ENTER (COMMAND+ENTER on Mac)
- SHIFT+ENTER
- ALT+ENTER

Use either one of the short commands, CTRL+C or CTRL+V, or right-click the selection for a menu to copy or paste the text to or from the *Chat* window.

It is also possible to chat with users in other domains. BroadCloud also supports Google federation. Group chat is not supported in Google federation, so the group chat option with these contacts is shown in gray.

5.2 File Transfer

File transfer functionality is accessible only through the *Chat* window.

- 1) To open the *File Selection* dialog box, click the **Send File** button on top of the *text* field.
- 2) Select the file to be sent from the dialog and then click **Open**. You can also drag and drop a file into the *Chat* window.
- 3) Once the file offer is issued and during its transfer, you can cancel the transfer (at any time) by clicking **Cancel**.
- 4) Accept an incoming file transfer by clicking the **Accept** button.
- 5) Reject the file transfer offer by clicking the **Decline** button.

After the file transfer has completed, the received files can be opened or viewed in the file manager by using the *Click to open* and *Show in folder* links.

5.3 Group Chat

Start a group chat by “multi-selecting” and right-clicking the main window contact list or through the Conference menu in the *Communications* window. More people can be added later to the chat by drag-and-drop or by using the Conference menu. Only the owner can add more participants.

A group chat works the same way as a one-to-one chat. All messages from anyone are sent to everyone else. All contacts need to be online to be able to participate in a group chat. You cannot invite an offline contact or a contact that is not on a device that supports group chat. This does not affect the group chat in any way.

A group chat history is saved and is available to view later in the *Messages* tab of the main window.

In the *text* field, the contacts' names appear in different colors to easily distinguish between who is writing.

Only the newest chat room messages are stored on the server. One-to-one chat messages are only saved locally.

Deleting a chat room is not supported.

Chat rooms can be moderated by the owner. Use the right-click menu options to remove a participant from your chat room. If needed, the removed participant can join later. The removal also applies to desktop share sessions.

5.4 Chat Recording

Chats can also be recorded as a service provider option; in this case, the client shows a recording indicator. Note that there are no end-user controls for chat recording.

6 Audio and Video Calls

The following table describes additional *Communications* window icons and explains what you can do with them, for voice and video calls.

Icon	What you can do
	Enter additional digits using the dial pad at any time during the call (for example, to insert a conference number). The dial pad is movable and can be dragged around the <i>Video Call</i> screen to a location you set.
	Mute your microphone by clicking the mute icon.
	Adjust the volume bar to adjust the volume. Dragging it all the way to the left mutes your speakers. This is shown by a small red cross in front of the volume bar.
	Use this icon to access the <i>Call Options</i> menu. In the <i>Call Options</i> menu, you can find different actions to use for a call depending on your settings and your service provider.

In the *Options* menu, there are the following options:

- Transfer a call to a third party.
- Put the call on hold. Note that if you hold the call, the other party cannot “un-hold”. This freezes a video call to the last frame of the video feed. In both voice and video calls, this is communicated to all parties by a notification appearing in the middle of the screen.
- Hide your own video.
- Add participants to the call.

Dial a number in the combined *Search and Dial* field to make a call. Once you type your numbers, BroadTouch Business Communicator searches for contacts on both the local contact list and the enterprise directory.

You can also call circuit-switched network numbers such as Global System for Mobile Communications (GSM); however, this depends on the service provider network you are using; there is no technical limitation.

Choose your video size from the *Preferences* and the *Video* tab. Your selection is used by default for future video calls. The available sizes are automatically presented based on your camera. The selected video size can be modified automatically depending on your CPU load and changing network conditions to optimize the video quality.

6.1 Call From Computer

Select a contact from your contact list to start communication and click the desired communication button. Type a phone number in the *Search and Dial* field at the top of BroadTouch Business Communicator window (search or communicate), to communicate with someone who is not on your contact list.

6.2 Call From Phone

The second option to communicate in the row of communication buttons is the **Call from Phone**. When you click this button, the desk phone instantly starts ringing and the call is established from your desk phone. This depends on your service provider configuration as other devices may also ring.

For remote calls initiated using the BroadTouch Business Communicator, you can also have mid-call controls such as hold/resume, transfer, and add participant.

Automatic *Busy – In Call* presence also works with the Call from Phone feature.

6.3 Answer Call

When someone is calling you, you see a pop-up notification on your screen. You can choose to answer, silence the incoming call, and then open a chat session with the caller, reject the call, or silence the incoming call by closing the popup notification window. If you silence the call, the ringtone is silenced but the caller does not see anything on their end. You can answer or reject the call after silencing it only if you have chosen the chat option. If you close the incoming call pop-up notification to silence an incoming call, then you do not have an option to answer or reject it any more. When choosing the chat option, chat is only enabled after the call has been answered or rejected.

If you reject the call, it causes the line to sound busy at the caller's end and they know that you rejected the call.

When someone is calling you with a video, you see the same pop-up notification; however, the options are answer with video, answer as voice only, silence and chat, reject, or silence (by closing the popup window). If you decide to answer as voice only, the call is voice only.

6.4 Contact Name Lookup for Incoming Calls

Whenever the incoming call does not have a calling name associated with it, BroadTouch Business Communicator can perform a local contact search. If the number matches one of the contacts on the BroadTouch Business Communicator contact list, the name is shown on the incoming call screen along with the alert.

Whenever you retrieve your call logs/history and the call log does not have a calling name associated with it, BroadTouch Business Communicator does a lookup in the local contacts and populates the name if a match is found.

6.5 Missed Call or Communication

When you have one or more missed calls or other types of communications, there is a notification on the left-hand side of the navigation pane in the main window. Clicking the icon takes you to the missed communication in the *Communications History* view.

6.6 Full Screen in Video Call

Full screen mode can be activated by clicking the **Full Screen** button or by double-clicking anywhere on a video.

Exiting full screen mode is done by pressing the **ESC** key or the **Windows** button. Exiting full screen makes the video call go back to its original state (even if there was resizing of the window previously before going full screen).

In a full-size window, you can see a similar *Options* menu at the top. It has the same functionality as it does in the normal view. When you move the mouse, the top bar and lower communication buttons appear on top of the video.

6.7 Multiparty Sessions

You can have many participants in a call, either in a *My Room* or in an ad hoc multiparty call. Add more participants by dragging and dropping them on to the *Communications* window or by selecting the Conference menu item via the *Communications* window menu button. By choosing the menu item, you can also add participants with just a telephone number.

In contrast to using *My Room*, which uses your permanent chat and collaboration rooms and conference bridge, you can start ad hoc multiparty sessions by either selecting multiple contacts on the contact list and starting a chat, by calling with them, or by expanding a one-to-one session into a multiparty session by dragging and dropping a contact into the *Communications* window. In an ad hoc session, the room used is a temporary one that is deleted once the session ends (that is, when the last participant leaves). Voice conferencing does not use a bridge but instead uses the BroadWorks N-Way Calling supplementary service in a sequential fashion.

If the XMPP service is not available, then ad hoc multi-party calls are not available.

6.8 Call Waiting

You can have one active call at any one time if you receive a new incoming call and accept it. The existing call is put on hold and you can change between these two calls by using the **Hold** and **Unhold** buttons.

6.9 Call Transfer

Blind call transfer is available in the *Communications* window; choose the Transfer Call menu item to transfer the call to someone else. Attended call transfer is also available in the same window, first call someone to check if the called party can take the incoming call and then transfer the incoming call to the desired called party.

6.10 Message Waiting Indication and Voice Mail

The Message Waiting Indication (MWI) service allows you to receive a notification for a waiting voice mail or video mail. By clicking on the message icon in the upper right-hand corner of the main window, BroadTouch Business Communicator calls the predefined mailbox number to allow the user to listen to the voice mail or view the video mail.

It is also possible to call voice mail from the dialer by long pressing the “1” icon in the dialer.

Missed calls are indicated by an icon in the main window. Missed video and audio calls are indicated with a different icon. Note that the MWI icon is in the same place when it indicates a new voice mail.

6.11 Call Park and Retrieve

Call Park is particularly suited for shared environments where one person can answer the call, park it, do something else for a while and continue the call from another device or let somebody else continue the call.

Transfer an ongoing VoIP call to a Call Park server and then retrieve it when needed. An ongoing call can be parked against your own number or another number (an extension). Call Retrieval works in the same way, the parked call can be retrieved from your own number (an extension) or another number (an extension) to provide flexibility for who is picking up the parked call.

A parked call is visible on your desktop in the active communications area so that you can easily retrieve it, but only for the duration of the BroadWorks Call Park announcement. After the announcement is over, the parked call disappears from the active communications area (since the triggering call is disconnected). After the call disappears from the active communications, the user has to remember the extension to which the call has been parked to retrieve it using the main window menu (or feature access code), unless the call was parked to the one's "own" extension. If the call is not retrieved after a certain time, then the server calls the parking user.

6.12 Call Pull

Call Pull allows you to pull an ongoing call from one of your devices to another one where the Call Pull feature is used. Call Pull can also be used with feature access codes (FAC), in this case, *11. In this release, user interface support has been added to the desktop so that an end user does not have to remember feature access codes.

6.13 Call Recording Controls

You can use call-recording controls in this release. Depending on your service provider's configuration, call recording can be initiated when a call starts or dynamically during a call (and start, stop, pause controls may be available). Additionally, there is an audio indication that call recording is ongoing as well as a visual indication. Feature access codes can also be used to control call recording when enabled in the configuration.

Recorded calls are accessed outside of BroadTouch Business Communicator; you cannot view them using the client.

Depending on your service settings, Call recording behavior is one of the following (this cannot be controlled in the client but in the self provisioning portal):

- Always – recording indication (icon) in the *Communications* window as well as the *Active Communications* UI.
- Always with pause/resume – recording indication (icon) in the *Communications* window as well as in the *Active Communications* UI (only pause/resume menus available).
- On demand – recording indication (icon) in the *Communications* window as well as the *Active Communications* UI (no stop menu available, only start and pause/resume). After a call is established, call recording starts on the server. If the user presses the **Start Recording** button during the call, the call recording is stored and the server keeps the recording of the whole call regardless of when the recording was started (except for pauses). Otherwise, if no start recording is initiated from the user, the call recording is deleted from the server.
- On demand with user-initiated start – recording indication (icon) in the *Communications* window as well as the *Active Communications* UI (menu options available for start, stop, and pause). Call recording can be initiated at any time and several times during a call. There are separate call recordings for each call recording startup.
- Never – no indicators or menu options present.

Pause/resume audio indication depends on your service provider settings. It is recommended to re-login after changing the call recording mode in the self provisioning portal.

6.14 Meet-Me Moderator Controls

You can control the functionality available to Meet-Me participants if you are the owner of the session in My Room. You can do the following:

- Dismiss one or more participants.
- Mute one or more participants.
- Lock or unlock the room (when locked no more participants can join).
- See active talker indication.
- See full audio participant list.

To invoke the features, you can use either the right-click menus or you can click on the Meet-Me moderator control icons of a participant. Note that most features are not available via icons. To dismiss or mute all participants or lock the room, use the right-click menus available for your own icon at the top of the participant list.

If you are not the owner, you can only see the XMPP (chat) participant list.

6.15 Forced Logout

Depending on your service provider settings, you may see a popup saying that you have been logged out due to another instance of the client logging in. This feature allows BroadWorks to track similar online client instances and only allow one of them to be online at the same time. When BroadWorks notifies the client to log out, all connections are terminated and client returns to the login window.

6.16 Echo (test) Service

Use this *Main* window menu option to make a test call to verify voice and video quality. The echo service asks you to record a message and plays that message back immediately before hanging up. The echo service may be available in different languages depending on your service provider settings.

6.17 Headset Support

You can control incoming and ongoing calls from a compatible headset. The feature set supported is answer/hang up as well as mute/unmute and volume up/down. The following Plantronics headsets have been tested, although other Plantronics devices should also work:

- Voyager Pro UC
- Savi 700 series
- Blackwire C3xx, C4xx, C5xx, and C7xx
- Calisto 620
- Audio 628USB

7 Desktop Share

To share your desktop:

- 1) In the main window, select a contact and click the **Share Desktop** button.
- 2) In the *Communications* window, click the **Share Desktop** button. This does not yet start the “share” but instead sets up connections to the server.

Once the server connection is set up, a **Play** button appears to start actually sharing your desktop.

- 3) To stop sharing, click the **Stop** icon. You are prompted to confirm the stopping of the “share”. While sharing, all other communications mechanisms are also available, except for video calling and file transfer.
- 4) To hide or unhide the *Chat* view, click the **Chat** button in the *Communications* window.

Desktop sharing works the same way in both My Room and the ad hoc sessions. For participants without BroadTouch Business Communicator, use the separate Desktop Share Invitation link, if available, by right-clicking the **My Room** button.

If you are using dual monitors, the client should share the primary monitor. If you have been sharing different monitors, make sure that you want to share the primary monitor. You can check the primary monitor in the operating system settings.

You can also remove desktop share participants. They are also removed from the group chat at the same time. If needed, the removed participants can join later.

Depending on your service provider settings, you may have to provide desktop share credentials manually.

8 My Room

My Room is started by clicking on the **My Room** icon on the left-hand side of the navigation pane. *My Room* is started automatically using your permanent chat room. Add more participants by dragging and dropping them into the *Communications* window or the Conference menu, or they can join your room by right-clicking your name on their contact list and choosing the *Join room* menu option. Once people have joined the chat room, they can click on the **Call** button of that window to join the conference. The room owner can also share their desktop.

To use the full functionality of *My Room* (desktop sharing, conferencing, and chat combined), you must manually enter your desktop sharing credentials, your conferencing number, and your PIN in the *Preferences* → *Credentials* window.

Only the owner of the room can share the desktop or add more participants. This applies to both *My Room* and any ad hoc sessions.

- 1) To see a Context menu, right-click the **My Room** icon on the left-hand side of the navigation pane.
- 2) To modify credentials and conference bridge information, select *Configure* to go to the preferences. If your service provider has automatic provisioning enabled, then this menu item is not present.
- 3) Select *Copy invitation* to copy an invitation link to the operating system clipboard (depending on your service provider setup, this menu option may not be available). Paste this link, for instance, to meeting invitation e-mails to allow BroadTouch Business Communicator participants to join the conference in one click from, for example, Outlook or Office applications. You can also copy the My Room invitation to the default email client and go to the My Room preferences via a right-click menu option.

The link has two parts: one for BroadTouch Business Communicator users and another one for users with some other client. Depending on your service provider settings, the invitation can also contain a link to the desktop sharing session. The invitation always contains a dial-in number and PIN for users who do not have BroadTouch Business Communicator. The desktop share link, when available, allows anyone to join a desktop share session from a standard web browser. In addition, the BroadTouch Business Communicator group chat session is supported with the web collaboration session.

The **My Room** icon also has a tooltip indicating the conference bridge details of your *My Room*.

For more information on desktop sharing, see section [7 Desktop Share](#). Desktop sharing works the same way for both *My Room* and the ad hoc sessions.

My Room uses your permanent chat room, permanent collaboration room, and conference bridge (audio or video). *My Room* is the only way to use the permanent rooms. Any other multiparty communications, such as selecting multiple contacts, and right-clicking for a conference call, or dragging and dropping for a one-to-one chat, is done using ad hoc rooms. Ad hoc rooms are deleted once the session is over.

All *My Room* sessions start as chats but call and/or share can be added to the session while in progress. File transfer and video conferencing are not supported in *My Room* or ad hoc sessions.

9 Search

BroadTouch Business Communicator supports a search of the enterprise directory. This takes place in the same *search* field that is used for both a local and presence-enabled contact list search.

BroadTouch Business Communicator automatically searches the local contacts and presence-enabled contact list in addition to the enterprise directory at the same time. As soon as there are results from the enterprise directory, these results are shown on a separate list in the main window. Additionally, there may be other search result groups from other search sources such as Lightweight Directory Access Protocol (LDAP) or Outlook.

Search results are displayed differently depending on the results of the contact list and directory search:

- If LDAP search (Corporate directory) or Outlook search are enabled, there are more result groups.
- If there are no results for a certain search source (local contacts, Outlook, LDAP, or BroadWorks telephony directory) that group is different in the user interface (UI).

The enterprise directory searches all available fields for the search string. By default, it waits for 1.5 seconds before it sends the search request to the server to minimize unnecessary load on the server.

Typically when adding a contact using directory search results, there are phone numbers and first names in addition to last names available. In addition, the Extensible Messaging and Presence Protocol (XMPP) address and other fields are imported when found to allow presence and chat.

LDAP search (Corporate directory) needs to be enabled by your service provider. In addition, you must manually provide your LDAP credentials in the *Preferences* → *Security* tab. LDAP search results are provided in the corporate directory group in the search results.

Outlook integration (search and calendar integration) on Windows requires one of the following versions installed on the desktop:

- Outlook 2007
- Outlook 2010
- Outlook 2013

Outlook search also works when several Outlook accounts are in use, but only one account is used at a time (default selected, which can be changed in Outlook).

Additionally, other related considerations are as follows:

- The client searches for contacts and calendar entries in the default Outlook account. The account is set to the default via *File* → *Info (left pane)* → *Account Settings* → *Account Settings* → *Data Files*. Select an account and mark it as "Set as Default". After making this change, sign out and sign back in to the client and it now searches that account for contacts and calendar entries.
- The client searches the Outlook contacts only on the local machine (that is, the *Outlook Address Book*). There is no Exchange server lookup performed. In addition, all directories in Outlook are searched for contacts, even deleted folders. The Contacts directory can also have multiple levels of subfolders.

Every minute, BroadTouch Business Communicator reads Outlook appointments. If there is an appointment running at the current time, then the presence is shown as *Busy – In Meeting*. Overlapping appointments are also handled. Following are some examples of BroadTouch Business Communicator operation with Outlook when time is 9:10 A.M.

- There is meeting “A” 9 A.M. through 10 A.M. Presence is shown as *Busy – In Meeting*.
- Presence is explicitly changed to *Available* at 9:15 A.M. Presence is shown as *Available*.
- In the next minute, BroadTouch Business Communicator again reads the appointments and sees that “A” meeting is running; however, the presence was already explicitly marked as *Available* and presence is not shown as *Busy – In Meeting* but *Available*.
- There is an overlapping meeting “B” 9:30 A.M. through 10:30 A.M. Presence is shown as *Busy – In Meeting* when the time is 9:30 A.M.

When deleting a meeting that is currently ongoing in Outlook, the presence status remains as *Busy – In Meeting* until the next time Outlook appointments are checked (once every minute) and after that, presence is shown as *Available*. This change may be instantaneous or it may take a minute depending on how close the timer is to being triggered.

The Outlook Object Security model was introduced in Outlook 2007. It has been tested with Outlook 2010 and Outlook 2007. For Outlook versions prior to 2007, the *Allow/Deny* pop-up window seen in previous releases should not be triggered. However, those versions are not officially supported. For Outlook 2013, the behavior should be similar to 2007 and 2010, meaning the popup should not come up with Outlook 2007, 2010, and 2013 in Release 20.0.0 and onwards. However, more tests are needed for this before official support for Outlook 2013 can be declared.

The presence update is only triggered by appointments and meetings that are either accepted by the user or made by them. All-day meetings do not trigger a presence change to *Busy – In Meeting*.

10 Full Enterprise Directory

BroadTouch Business Communicator allows for the browsing of an entire BroadWorks enterprise directory.

To view the BroadWorks enterprise directory, click the **Directory** button on the left-hand side of the navigation pane (if available). This feature depends on the service provider configuration so it may not be visible in all clients.

11 Communications History

The fourth icon from the top in the main window on the left-hand side of the navigation pane displays your messaging history. Double-clicking a conversation on the list opens it in a new window.

BroadTouch Business Communicator saves a call history for placed, received, and missed calls. The call history makes it easy for you to redial and call back when you have missed a call or you want to easily dial a contact with whom you have recently spoken.

Double-click on a name in the list to call back directly (this calls back the same way you previously spoke, for example, if you were in a video call, double-clicking starts a new video call). Double-clicking an incoming call item from presence-enabled contacts opens a chat window, from which a call can also be made.

To clear the missed chat indicator, you need to open the missed chat.

The *Communication History* missed communications badges can be cleared by using the right-click menu from the **Communication History** button on left-pane. The menu provides options to clear “All missed”, “Clear missed chats”, and “Clear missed calls”.

12 Security Classification

BroadTouch Business Communicator supports security classifications, which are typically used in government deployments where users are divided into security clearance categories. The security classification is displayed based on the security classification of all session participants. The security classification is displayed in chat as well as audio and video calls. Security classification has to be set by your service provider; the client checks the assigned security classification at login.

For calls, the security classification can be changed during a call by a user and it works with supplementary services such as Call Transfer and Conference.

For chat, the security classification is displayed but cannot be changed.

13 Preferences

Preferences provide access to available settings for BroadTouch Business Communicator. Follow these steps to access *Preferences*.

Windows

- 1) Click the BroadTouch Business Communicator logo in the main window title bar.
- 2) Select *Preferences*.

OS X

- 1) Select BroadTouch Business Communicator from the main menu.
- 2) Select *Preferences*.

13.1 Credentials

My Room

Specify the conference details to be used for your *My Room*. If your service provider has automatic provisioning enabled, then you cannot change these details.

Web Collaboration

Depending on your service provider settings, web collaboration credentials may need to be manually entered and can be viewed and edited. If automatic provisioning is enabled, then you cannot change these details.

Protocols

If protocols such as XMPP or Xsi are available to be viewed, they appear here.

Device Management

If the Device Management configuration URL is available to be viewed, it appears here.

13.2 General

Language

Select your language then click **OK** or **Apply** and the change takes effect immediately. Note that the number of languages depends on your service provider.

Log In

Enable or disable automatic sign-in when starting the application.

Confirmations

Usually there is a confirmation pop-up notification each time you remove a contact or call history record. By selecting one or all of the check boxes, you disable the confirmations when deleting information. Here you can also control whether there always is a pop-up notification for publishing location information. Typically, this is shown at login.

Depending on your service provider configuration, you can also have confirmations for BroadTouch Business Communicator API, which is used by third-party applications such as Outlook Add-in or compatible headsets. You can allow such third-party applications in *Preferences* to obtain information from BroadTouch Business Communicator and enable or disable confirmation pop-up notifications when third-party applications request information from BroadTouch Business Communicator. You can also choose default behavior to always reject or accept requests from third-party applications and allow or reject individual third-party applications.

Logging

Logging is used for troubleshooting. You may be asked by your service provider to turn on logging and then send a log file directory.

13.3 Audio

Output Device (Speakers)

Choose a headset, PC-integrated speakers, or external speakers for audio output. Your external playback device is selected by default (if you have one connected).

Voice Recording (Microphone)

Choose a headset microphone, PC-integrated microphone, or external microphone for voice during calls. Your external recording device is selected by default (if you have one connected). You can also choose automatic gain control and test your recording device.

Alert Signal

Select the audio device and ring signal that is played when you receive an incoming call. The same signal is used for both voice and video calls. You can also select your own ring signal.

Sounds

Select which events cause a notification sound. To disable the sound, uncheck the check box. Select a sound event and then click **Play** to hear the sound.

13.4 Video

Capture Device

Select a camera that you want to use for video calls. Your external web cam is selected by default (if you have one connected).

Video Size

Select one of the available sizes. Note, however, that higher sizes require more bandwidth and a more capable central processing unit (CPU).

13.5 Proxy

Proxy Settings

Select how to handle HTTP proxies. By default, the system settings are used but you can also choose not to use an HTTP proxy or to use the BroadTouch Business Communicator (client) proxy settings.

14 Call Settings

BroadTouch Business Communicator supports the following service management features allowing supplementary services to be managed using the native *BroadTouch Business Communicator Call Settings* window:

- BroadWorks Anywhere
- BroadWorks Remote Office
- Call Forwarding
- Do Not Disturb
- Hide Number (Calling Line Identification Presentation [CLIP]/Calling Line Identification Restriction [CLIR])
- Simultaneous Ring Personal

You can also use the call settings with a *Main Window* on the top of the window, if this feature is enabled. When enabled, this feature allows BroadWorks Anywhere, Do Not Disturb, Remote Office, and Call Forwarding to be managed in the *Main Window* using single clicks or right clicks.

14.1 BroadWorks Anywhere

BroadWorks Anywhere allows service providers to offer fixed-mobile convergence (FMC) services today without additional equipment.

BroadWorks Anywhere simplifies communications for on-the-go users and remote users by extending the features of a desk phone to any other fixed or mobile device, regardless of the network or handset manufacturer. Callers dial one number and can reach you on any phone the user chooses. A desk phone, cell phone, and/or a soft phone may ring simultaneously.

Enjoy voice call continuity with the ability to move live calls from one device to another without hanging up.

Add locations (numbers) that can be used in the service via the **Add New Location** button. Use the *Alert all locations simultaneously* check box to activate parallel ringing.

The *Diversion inhibitor* check box prevents a call ending up as a voice mail, which can be problematic in, for example, conference call situations.

Select *Answer Confirmation* to receive a separate audio prompt when answering a call from that number (location). It may be useful in cases where, for example, mobile numbers are being used to prevent incoming calls going to mobile voice mail since the call will be ended without going to voice mail if the answer confirmation is not provided.

Select the *Call Control* check box to enable the server platform to provide mid-call services such as Call Transfer and Conferencing for that number (location).

14.2 BroadWorks Remote Office

This service allows the use of any phone as the office phone from a charging and numbering perspective. For instance, a hotel room phone can be used as the office phone.

Enable Remote Office by clicking the Edit icon and specifying a phone number to be used as the Remote Office number.

14.3 Forward Calls

Enter a number to which your calls should be forwarded. Different variants of call forwarding are supported, such as forwarding always, forwarding when busy, and forwarding when you cannot answer or when you are unreachable.

14.4 Do Not Disturb

When you activate this service, all calls are typically blocked by the server and sent to voice mail. Enable this service by clicking the *Enable* check box.

14.5 Hide Number

You can hide or display your number when calling or communicating with other parties or contacts. Hide your number by clicking the *Enable* check box. To show your number, set this to "Disable".

14.6 Simultaneous Ring Personal

Add up to ten additional numbers or Session Initiation Protocol Uniform Resource Identifier (SIP-URI) addresses that you would like to ring in addition to your primary number when you receive a call. In addition, specify whether you want answer confirmations. This service is an older variant of BroadWorks Anywhere.

15 Sign Out

Signing out of BroadTouch Business Communicator sets your status to “Offline” for your contacts and displays the *Sign In* screen.

15.1 Sign Out of BroadTouch Business Communicator

To sign out, follow these steps.

Windows

- 1) Click the BroadTouch Business Communicator logo in the main window title bar.
- 2) Select *Sign Out*.

OS X

- 1) Select *Actions* from the main menu.
- 2) Select *Sign Out*.

15.2 Exit Application

To exit the application completely, follow these steps.

Windows and OS X

Close the *Sign In* window.

Windows

- 1) Select the BroadTouch Business Communicator logo in the main window title bar.
- 2) Click **Exit**.

OS X

- 1) Select BroadTouch Business Communicator from the main menu.
- 2) Select *Quit BroadTouch Business Communicator*.

NOTE: Closing the main window (not the *Sign In* window) does not exit the application but rather minimizes the application to the system tray (Dock). This allows you to continue to receive calls and messages without having the *Contact List* window appearing on the desktop.

16 Multi-Device Support

BroadTouch Business Communicator supports users with multiple devices, according to the XMPP specifications. This is comprised of several features:

- Chat invitations sent to a user are received in all devices. Before the session is accepted, messages are sent to all devices and once answered, the chat messages go to the device that has sent a reply message.
- One can retrieve one's own presence notifications when another client updates the user's presence. The client stores this information and updates its own presence so that it is the same as the higher priority status it received, (that is, when the received status update is manual). If the received presence update is not manual, it does not react to the received update; it only notes it.
- Accepting a sharing presence invitation in one client is also recognized by another client, and both clients start receiving presence updates.
- A new presence subscription made in one client is recognized in another. If the contact blocks the "invitation", there are presence notifications from the server to all of the user's clients that indicate that the subscription was terminated and this information is shown to the user. If the client receives two presence authorization requests from two or more devices for the same user, it only shows one request to the user.
- Removing a contact from the contact list in one device is recognized in another client and the contact list is updated (that is, the contact is removed) in the other client as well.

If a user has many devices, each device has the same status when shown to the end user. In addition, the contacts on the contact list always see the same status with updates shown in the following priority order:

- *Busy*
- *Online*
- *Away*
- *Offline*

This means, for example, that if one client publishes a *Busy* status and another client publishes another status, contacts see the user as *Busy*. Compatible devices such as desk phones are able to show presence in the same way.

17 System Requirements

System requirements are as follows:

- Operating system: Mac OS 10.6 Snow Leopard, Mac OS 10.7 Lion, Mac OS 10.8 Mountain Lion, Mac OS 10.9 Mavericks, Windows Vista, Windows 7, or Windows 8/8.1 (Classical view only).
- The installation footprint is approximately 125 megabytes (MB).
- For voice calls, a sound card, speakers, and a microphone or a headset are required.
- For video calls, a web cam is required.
- A minimum 1 GB random access memory (RAM) is required.
- Minimum 1 gigahertz (GHz); however, 1.5 GHz is recommended, Pentium 4 at a minimum, dual core CPU is recommended for video calls at a minimum.
- Open Graphics Library (OpenGL) 1.5 or higher is recommended.

For high-definition (HD) video, the following is recommended:

- HD camera
- HD resolution support in display
- Pentium Quad Core or equivalent
- 2 GB RAM

18 Troubleshooting

Why can't I chat with contacts from Yahoo?

Chatting with users in other domains is possible, but depends on the domain. For instance, BroadCloud supports Google federation but not Yahoo. However, group chat is not supported in Google federation, so the group chat option with those contacts is shown in gray.

Why can't I change the avatar?

Double-clicking the avatar should open a File Explorer view to select a file. If your XMPP connection is lost, changing the avatar does not succeed. A lost XMPP connection is indicated in the main window's top notification area.

My contacts are all offline and my client's status bar says "XMPP unavailable". What does this mean?

It means that the XMPP connectivity has been lost for chat, as well as for presence; however, you can still make calls. You should contact your service provider.

Why am I offline?

If you have selected "Offline" status, you are shown as offline to others. Another possibility is that you may have lost your Internet connection. In this case, the client does not log out, but rather enters an offline mode where a contact list is available but communication is not possible.

Why can't I have more video resolutions available?

You can choose your video resolution from *Preferences* and the *Video* tab. Your selection is used by default for future video calls. The available resolutions are automatically presented based on your camera.

Why can't I change my user name and password?

User name and password editing is not supported in the client. To edit your user name or password, contact your service provider.

In the preferences, the client only supports changing LDAP and desktop sharing credentials.

Why does my all day calendar entry not trigger *Busy – In Meeting* presence status?

All day meetings do not trigger a presence change to *Busy – In Meeting*.

To trigger the presence update, the meeting must be self-generated or accepted (tentative or fully accepted). The presence update is only triggered by appointments and meetings that are either accepted by the user or made by them.

Why aren't all my group chat messages saved?

Only the newest chat room messages are stored on the server, but never for My Room.

Why aren't all my chat messages available in my other devices?

All 1-1 chat messages are saved, but only locally, so they are not necessarily available in your other devices. Incoming messages are sent to all devices; however, the ones that you send are only stored in the device that you are using to send the message.

Why can't I change the XMPP address of a contact?

This is not supported in this release.

Why does my location show an incorrect address?

It is done based on the public IP address that the machine is using. The IP address is mapped to a physical location. You can also manually change the location by clicking the avatar and changing the location icon.

Why can't I start desktop sharing?

To share your desktop, you need to have valid credentials, either by manually entering desktop sharing credentials in the *Preferences* → *Credentials* window, or by using auto-provisioning to enable the desktop sharing menu items and icons. However, you can participate in desktop sharing sessions even without any sharing credentials. Your service provider settings dictate if auto-provisioning is enabled or not.

Why can't My Room participants share the desktop?

Only the owner of the room can share the desktop. This applies to both *My Room* and ad hoc sessions.

I have a Plantronics USB headset and the call control features are not working. Is there anything special I need to do to enable call control support?

In order to use Plantronics headsets on Windows (not supported on OS X), several steps are needed:

- 1) When the client is started, you must accept the API connection request from the connector/add-in device.
- 2) In addition, you must separately install the Plantronics Spokes framework for USB phones to work if it is not already installed. Instructions for Spokes installation should be part of the USB headset installation packages. The Spokes software itself can be downloaded separately from the Plantronics web site.

Additionally, your client must have the feature enabled by your service provider.

19 Appendix A: Keyboard Shortcuts for Desktop

The following table lists the currently supported keyboard shortcuts. You can use these keyboard shortcuts to quickly perform frequently used actions.

Shortcuts for Windows	Shortcuts for Mac	What it does
-	Cmd-Q	This quits the application.
CTRL+F4	Cmd-W	This closes the selected window (except for a contact card and the <i>About</i> windows).
CTRL+C	Cmd-C	This copies selected text from BroadTouch Business Communicator to the clipboard.
CTRL+V	Cmd-V	This pastes text from the clipboard to the location selected using the cursor in BroadTouch Business Communicator.
Enter	Enter	When in the <i>Communications</i> window, this sends a chat message (if the <i>Chat</i> view is visible). When in the contact list, this opens a chat with the selected contact. When in the <i>Communications History</i> , this opens a communications session with the contact or address related to the selected item. This opens a chat if the item was chat and a call if the item was a call.
-	Cmd-,	This opens <i>Preferences</i> .
F1	Cmd-?	This opens <i>Help</i> .
CTRL+A	Cmd-A	This selects all text in the <i>Chat</i> view.

20 Appendix B: Configure USB Headsets

This section describes the steps necessary to properly configure USB devices to function with BroadTouch Business Communicator. These configuration steps currently apply to Plantronics headsets and Polycom U300 USB telephones running in the Windows platform only.

First, make sure that “Use Default” is selected in the *Audio* tab of BroadTouch Business Communicator *Preferences* for both input and output devices.

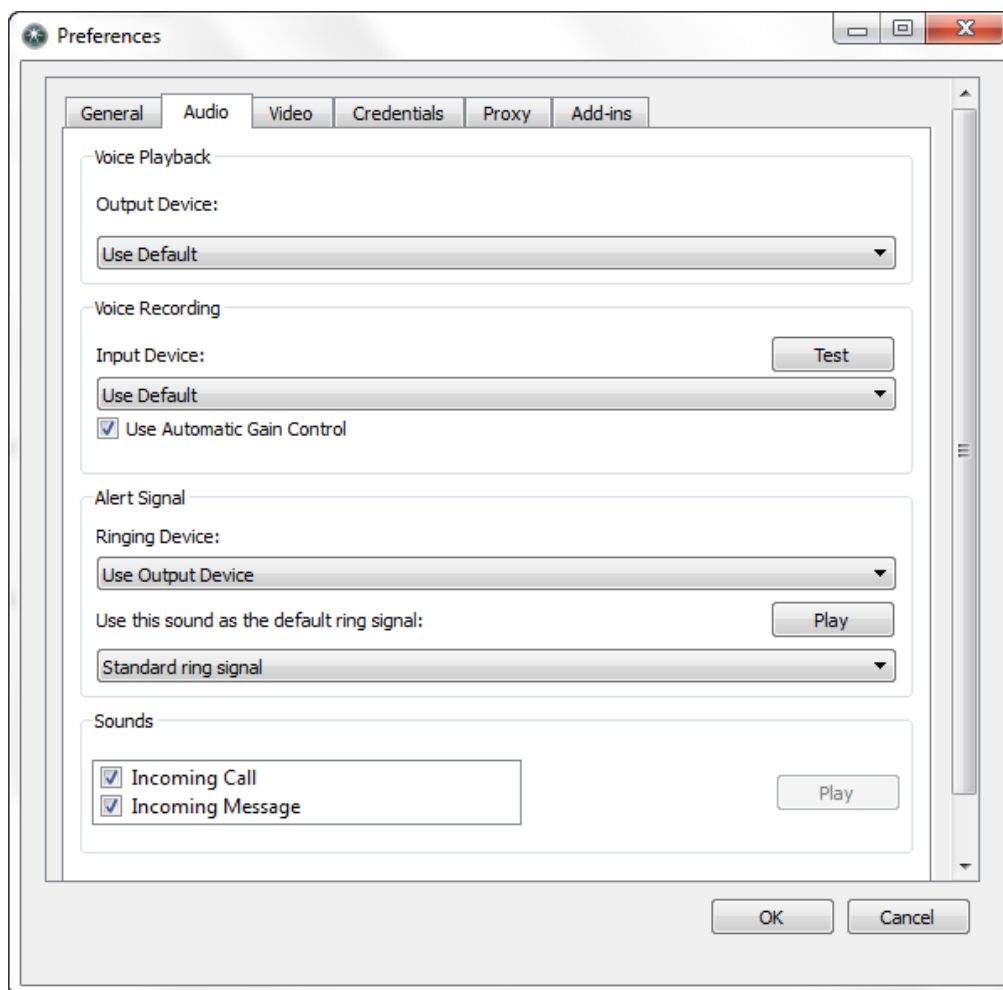

Figure 1 Preferences Window

Next, make sure that the Sound settings in Windows pertaining to “Recording” and “Playback” devices are correctly configured. From the *Sound* applet, select the *Playback* tab.

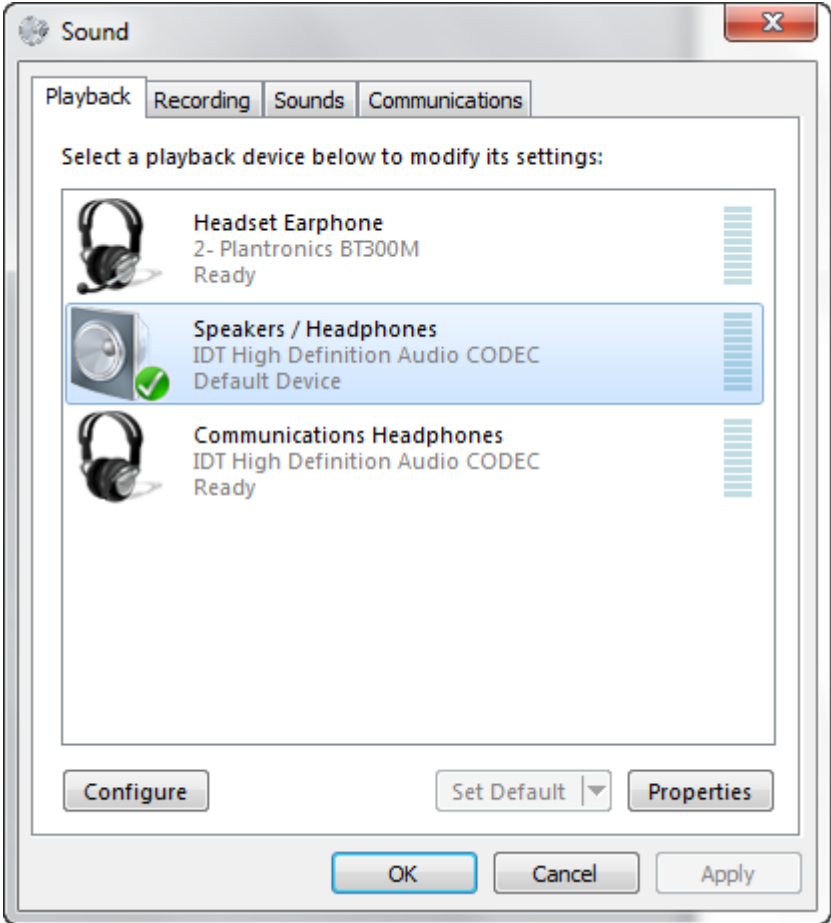

Figure 2 Sound Window – Playback Tab

In this example, the user has a Plantronics BT300M (the USB dongle accompanying a Voyager Legend UC) connected to their PC.

Click **Headset Earphone** to highlight the device and click on the drop-down arrow next to the **Set Default** button.

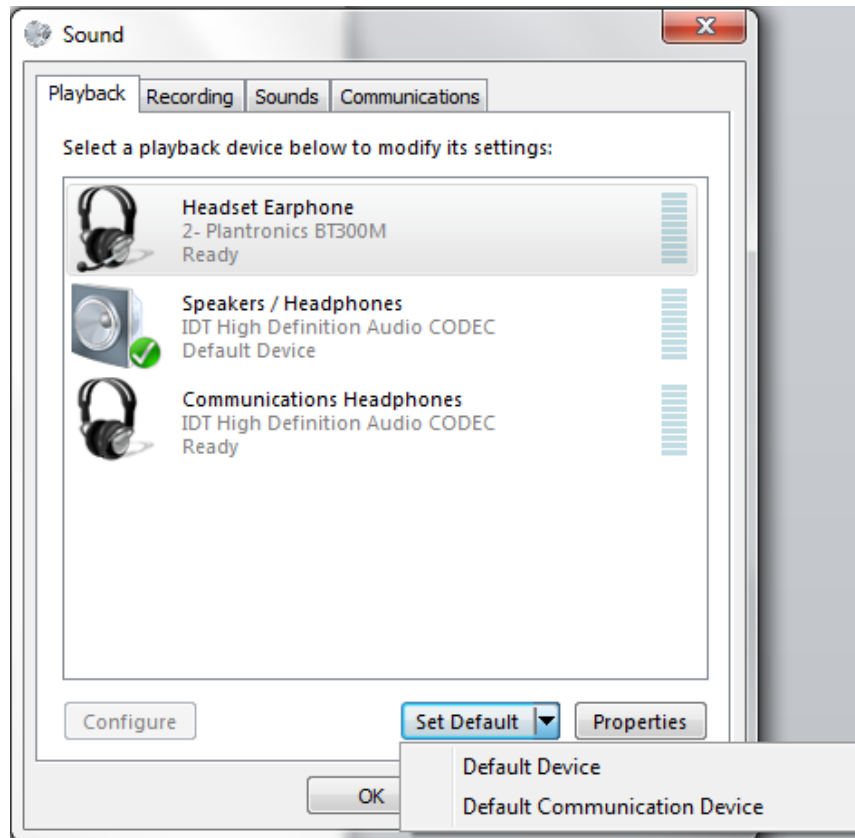

Figure 3 Sound Window – Playback Tab – Set Default

Select *Default Communication Device*. The following screen is displayed.

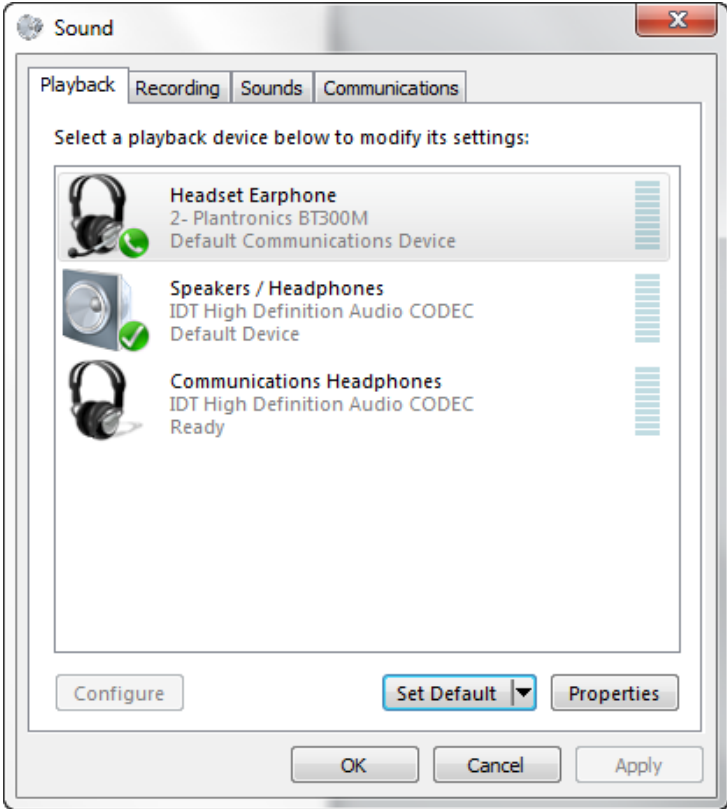

Figure 4 Sound Window – Playback Tab – Default Set

Next, select the *Recording* tab

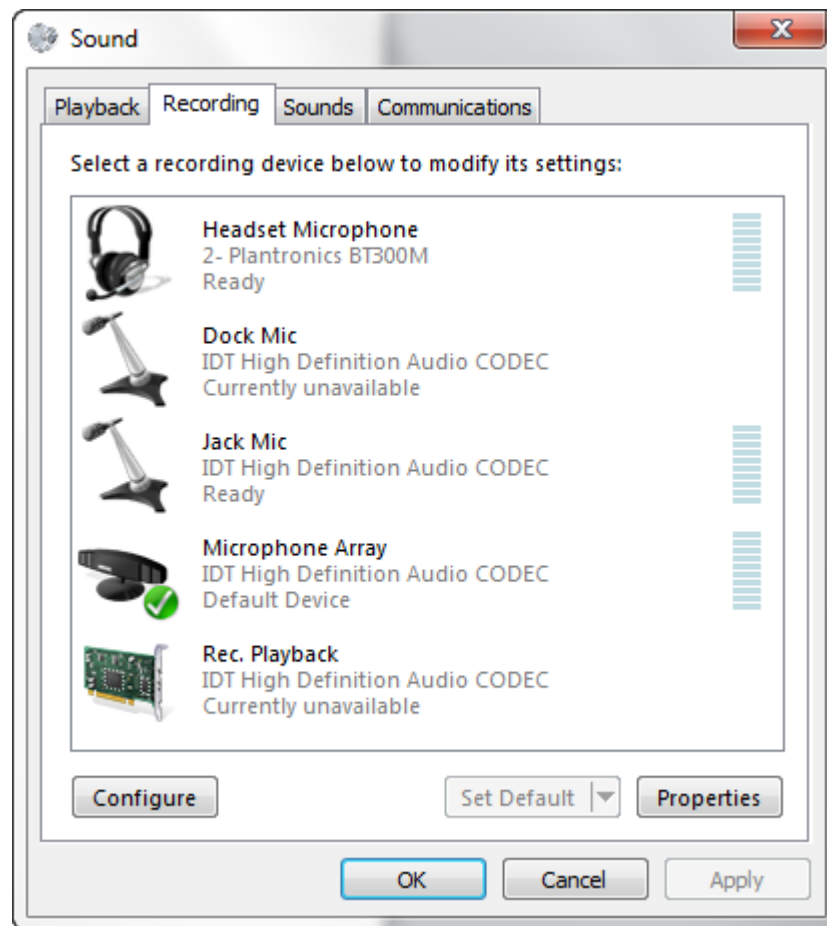

Figure 5 Sound Window – Recording Tab

Again, click on **Headset Microphone**, which represents the connected Plantronics BT300M device, and click on the drop-down arrow next to the **Set Default** button.

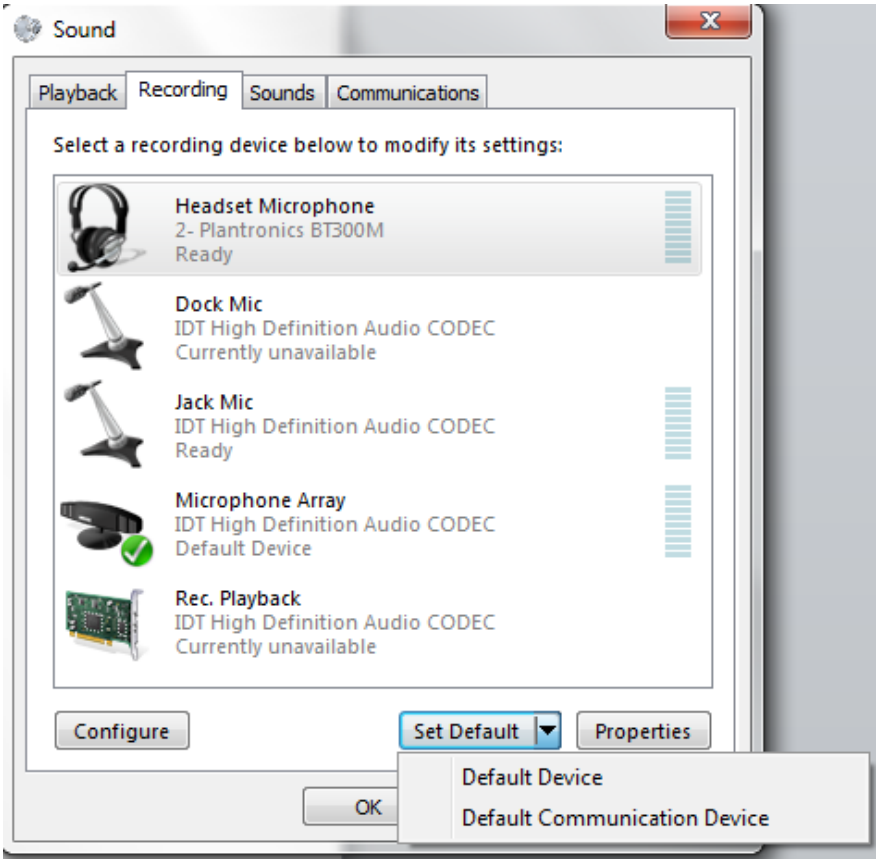

Figure 6 Sound Window – Recording Tab – Set Default

Select *Default Communication Device*.

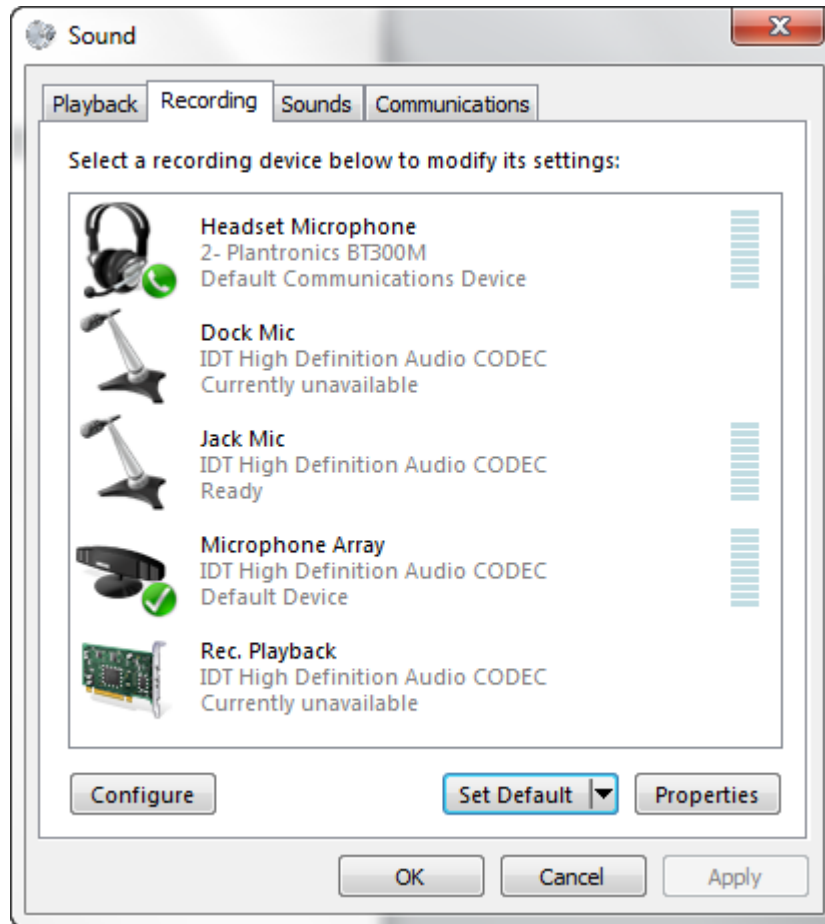

Figure 7 Sound Window – Recording Tab – Default Set

Click **OK** to save the changes. The *Sound* window is dismissed and your device is now ready to be used by BroadTouch Business Communicator.
